Source-to-Sea Management – a new topic for SuSanA?

- S2S attempts new ways to govern and manage resource flows in a continuum from source to sea.

Looking through the sanitation & wastewater lens

- How is sanitation and wastewater management addressed in the source-to-sea approach?
- Which tools and practical experience from the sanitation sector can be used to inform the source-to-sea approach and to support its practical application?
- What are the opportunities that the source-to-sea approach offers for the sanitation sector?
